FACES
THE ULTIMATE COMPOSITE PICTURE

THIS WILL BE OUR NEXT KIT IN THE LYLE & LOUISE SERIES

AWARD-WINNING SOFTWARE HELPING STUDENTS IN THE CLASSROOM

The education edition of our award-winning software is a great way to enhance classroom education for eighth grade and higher. FACES 4.0 EDU lets students create billions of different human faces with point-and-click selection from a rich database of facial features. With the help of IQB's software, your classroom will come alive.

Our software is an ideal support for criminology and forensic classes, giving students hands-on experience in how suspect composites — like DNA, fingerprints, and other evidence — are used to solve crimes. Students can use FACES 4.0 EDU to carry out simulated witness interviews, develop facial composites, and even create virtual line-ups.
