Q: Shell script - unable to parse variable Here's my question: I need to run a script in a folder of my pc, and then copy the file that i need to run to a specific folder. I'm able to run the script, but when I add a variable, shell doesnt seem to be able to parse it. The script is this: `#!/bin/bash # Needed to execute the shell scripts in a folder # Source: DIR="$HOME/Desktop" echo "sh: $DIR: Is a directory" if [-d "$DIR"]; then echo "sh: $DIR: Is a directory" DIR="$DIR" else echo "sh: $DIR: Is not a directory" fi # Press ENTER to continue read YN if ["$YN" = "Y"]; then # Copy the needed shell script cp *.sh $DIR fi exit` The script is a shell script, and I have to type "Y" to continue When I type "Y" nothing happens, the script just stops. I get this message in the terminal: `sh: /home/lap/Desktop/i.sh: Is a directory`
