FIFA is a football simulation video game franchise that has been developed and published by Electronic Arts. The series was originally developed as a sports game series aimed at arcade play, but today the series is a video game franchise that has sold more than 100 million copies worldwide, grossing over \$4 billion since the series' inception in 1987. Its most popular title was developed by EA Canada and released in North America in September 2001 and internationally in November 2001. It is the best selling sports franchise of all time. What are the differences between FIFA and other football games? The most important difference between FIFA and other football games is that FIFA is focused on player skill and tactics. The game can be played in a variety of modes and the gameplay is much deeper and more engaging than most other football video games. Unlike most football video games, FIFA includes real and recorded voices, real stadiums, and professional players. FIFA is best played with a controller or mouse and keyboard. The mouse and keyboard helps give players control in a realistic way. All actions have a high level of responsiveness, and the combination of a mouse and keyboard allows players to direct their players in a much more complex, involved and realistic manner. Unfortunately, the Windows Vista operating system has created many issues for controllers and mice that are not compatible with it. This means that players are forced to use the mouse and keyboard as controllers. There are also some keyboard issues with Windows 8, but this is covered under the official driver support.
