MENTALMATH is a math helper that calculates math expressions for you. The top menus are reserved for the main operations: Addition, Subtraction, Multiplication and Division. Apart from calculating the answers, the program is able to display the proper difficulty of the math problems and to generate several sample expressions

that you can practice. The tool offers a plethora of profiles created by anyone of you for practice or school use. If you're not interested in a certain profile, you can create a new one or simply save the profile you're using as your own. You can even load this profile at a later time. Set the difficulty of the operations you want to practice by selecting between Low, Medium and High. The program

will use the configured complexity when it generates expressions for you, but you can adjust this amount in the settings menu. You can also choose the number of items that should appear in the calculations. For instance, there are three possible configurations: One item, Two items and Four items. The numbers are not limitless, however. You can also set the maximum value for the

calculated results. For instance, you can change the value to 3, 5 or 7 items only. If you choose to use the program in quiz mode, you will need to specify the countdown interval first. This is an indicator of the time gap between two consequent questions. The countdown starts when you start the quiz, so when you're answering the questions, you can see your progress visually at the top of the main

GUI. When it comes to the interface, MENTALMATH is not easy on the eyes, as you will need to adapt to the dark-colored design. Also, note that the main GUI does not reflect the settings made, so you'll need to remember the options that was originally selected. One minor inconvenience is the lack of notepad function that MENTALMATH offers. If you want to submit your answers, this is

the sole way to do it. The tool is free to use and offers more than 15,000 expressions to play with. These can be generated using the programs included in the package. The program cannot generate problems for all the expressions, but it is still a great way to practice expressions. Like it? Share with your friends!
