Joining Photoshop is a long process, and it may seem daunting at first. Here are 10 tips to help you along the way. Quick Tip Photoshop is at the heart of every advanced photographer's dream, as well as more than just a way to share images online. Adobe's Photoshop is the industry standard, and it's been the industry standard for so long that its name has become a verb. It is common parlance to say that an image has been "photoshopped," or even just "shopped," meaning that it's been edited or manipulated. It uses a layer-based editing system that enables raster image creation and altering with multiple overlays that support transparency. Adobe promotes Photoshop as a tool for professionals. However, beginners can use Photoshop as well with many helpful tutorials on the market that train users in how to use Photoshop's various features. The program is pretty intuitive if you've done other photo editing. First, you can choose to create a new document, or simply open an existing image file. The interface will be organized by layers and groups. While a finished image, such as a portrait, contains many layers of enhancements, some features that are used are kept as separate layers. The layers can be activated or deactivated so you can find the exact look that you're trying to achieve. You can move layers around and merge them for a cleaner image, or even create a new document from a selection, which will make a new layer with all of the shapes of an image that you've selected. You can define a new blend mode to apply when you move layers between documents, or simply create new documents from layers and documents. Photoshop comes with many brushes that can be applied to the individual objects in a photo. You can create unique effects using these brushes, which can be downloaded from the program. Adobe offers a free trial of Photoshop so you can be sure that the features of the program will meet your needs. Grill Enthusiasts, Cooking Fanatics Can Now Customize Their Taste Buds San Francisco, CA - May 28, 2011 - Have you ever thought about customizing the taste of your food? Or maybe even just know why your idea of the ultimate hamburger was so different from the others? It turns out that your brain already knows the answer, and it can now be told that customizing the flavor of your food is possible with a new device. The Smarter Taste is a Bluetooth-powered gadget that allows users to switch flavors just by passing their tongues over it. It also plays music, communicates with other devices, and lets users customize the intensity of the flavors with air pressure. "Using this device is really amazing, especially when you realize that your tongue has the ability to change the flavors of foods," said Carol Tamura, founder of Smarter Taste. "You can change the taste of things before you even eat them just by blowing on them." The app on the Smarter Taste lets users choose four different flavors; each choice is based on the kinds of foods that are usually associated with those flavors. For example, a user could choose a light savory flavor like grilled meat. As the tongue presses down against the pad, the flavor intensity will increase or decrease. If someone enjoyed a food's original flavor, but hated the way it was cooked, then a new app called Chef Boyardee will allow you to make their meals in whichever style you prefer. The recipes can even be changed, allowing you to adopt someone else's (or your parents') favorite home cooking style and experiment with a new way of cooking. "Using this device and app lets you customize the taste of food in ways you've never thought possible," says Tamura. "With all the advances in science and technology, it is mind blowing to see how much more we have that we can learn to make food taste so delicious and different." The Smarter Taste is currently available on Kickstarter, and is looking to raise $25,000 for early production. The first backers to pledge will receive their Smarter Taste devices beginning in September, 2011. Please visit www.SmarterTaste.com to pledge your support and to find out more. About Smarter Taste Smarter Taste is developing Bluetooth-based appliances that empower the human palate. By registering the users' distinct tongue characteristics, using software algorithms and a conductive pad, Smarter Taste can deliver customized

s wave function in the asymptotic region, the time-dependent wave function in the intermediate region is nearly the same as the solution of the Schrödinger equation with the initial quantum state. This phenomenon is known as the factorization property or Dicke state [@Dicke; @Javanainen]. For a bound state with the binding energy $E_{\rm b}$ and the angular momentum L, an N-quasiparticle state is formed by the bound state and an unbound $N-1$-quasiparticle state. The factorization property implies that the $N-1$-quasiparticle state is unbound. This property holds for the collision at $E_{\rm c}$, as shown in Table \[tab1\]. The $N-1$-quasiparticle state is simply the ground state of a two-body system. Thus the factorization property guarantees the bound states in the system. Summary ======= We have investigated the characteristics of the quench dynamics of ultracold Bose gases. The quench dynamics is described by the Fermi-Bose mapping in the thermodynamic limit of the system. The Fermi-Bose mapping is formulated for any finite system and also for systems without the restrictions of translational symmetry and the normalization condition. Applying the quench dynamics to ultracold boson gas in an optical lattice, we derive an analytic expression for the nonequilibrium energy of the system. This analytic formula depends on temperature T and interaction strength U of the system. We find that the nonequilibrium energy is a nonmonotonic function of the quench time t. The nonequilibrium energy shows the nonanalytic behavior at the critical quench time of $t_{\rm c} = (\pi/2U)^{1/2}$. The critical quench time also depends on temperature and interaction strength. This behavior of the nonequilibrium energy qualitatively agrees with the theoretical calculation using the Boltzmann equation.
